What is a solar panel mount?

The purpose of a solar panel mount is to serve as a foundation for a solar panel. Mounting systems allow for solar panel arrays to be positioned in the most effective location to maximize the panel's exposure to sunlight. The type of solar panel mounts will vary widely depending on the rooftop or surface type where it is being installed on.

Do solar panels need mounts?

Solar panel mounts are a common component of almost every solar panel array. Although there are newer solar panel technologies coming out that do not require mounts, such as the Lumeta solar module that are being developed, the majority of solar panel arrays on the market and the ones already installed will require this feature.

What angle should a solar panel mount face?

This is usually at a 30-degree angle and should face south or southwest. Solar panel mounts can be completely customized to facilitate the effective positioning of the attached solar panel array to meet these parameters.

How do you mount solar panels on a roof?

The most commonly used mounting system is a classic roof-penetrating rack. This is simply a rack that is drilled into a roof with additional screw holes or other attachment mechanisms on top of its surface so that the solar panels can be easily attached to them. Roof-penetrating racks come in many forms.
