Can photovoltaic panels improve crop rotation in China?

The installed capacity of photovoltaic panels in countries around the world, especially in China, is increasing... This is the first effort on regional annual crop mapping in China at the 10-m resolution, which permits assessing the performance of the soybean rejuvenation plan and crop rotation practice in China.

What is remote sensing derived dataset for large-scale photovoltaic power stations in China?

We provide a remote sensing derived dataset for large-scale ground-mounted photovoltaic (PV) power stations in China of 2020, which has high spatial resolution of 10 meters. The dataset is based on the Google Earth Engine (GEE) cloud computing platform via random forest classifier and active learning strategy.

What can a 10-m national-scale distribution dataset tell us about China's PV power stations?

Above all, as the first publicly released 10-m national-scale distribution dataset of China's ground-mounted PV power stations, it can provide data references for relevant researchers in fields such as energy, land, remote sensing and environmental sciences.

This paper presents a preliminary feasibility study of using aerial, fixed-pitch propellers, underwater. Tests were performed in both air and in water using a test stand that was designed to study the efficiency of commercially available, counter-rotating, multirotor propellers. Experimental results showed that the propellers can operate ably underwater in terms of thrust to power ratio ...
