How do I connect solar panels to the grid?

To connect solar panels to the grid, you need to install a bi-directional meter on your home. This allows energy produced by your solar panels to be fed into the grid when you're not using it, and for you to draw energy back from the grid when you need it.

Why should a solar PV system be connected to the grid?

For financial benefit. Connecting your solar PV system to the grid allows you to take advantage of the FIT, which gives you a fixed amount of money for each kWh of electricity you generate. On top of these payments for energy generation, you also receive a sum of money for feeding any surplus energy into the grid.

What is a grid-connected solar system?

As the name suggests, a grid-connected solar system is tied to the utility grid. What distinguishes it from other solar setups is that the energy runs in two different ways. When your household requires more energy than your solar system generates, the house draws in energy from the utility.

What is an on-grid Solar System?

Often referred to as a grid-tie or grid-connected system, an on-grid solar system is a system that is connected to the utility grid. It allows your home to use the power generated by your solar panels, as well as the power supplied by the grid. This means even on cloudy days or at night, you will always have a reliable power source.

How do I connect a solar inverter?

Connect the DC output from the solar panels to the DC input on the inverter using appropriately sized DC cables. 4. Connecting to the Electrical Panel: Connect the AC output of the inverter to a dedicated breaker in your main electrical panel. This connection allows the solar energy to feed into the grid. 5.

Do I need a permit to connect solar panels to the grid?

Before you connect solar panels to the grid, there are a few requirements you need to understand and meet. Interconnection rules can vary by utility and state, so it's essential to speak with your utility company and obtain the necessary permits before installing a grid-tied PV system.

Please be noted, This grid tie inverter cannot be used as off grid/stand alone solar system. The output need to be connected to the grid power. Can not supply power directly to the AC loads. DO NOT use solar controller load ports to connect to the inverter; Only use the 36V/48V battery to power the inverter
