What is a battery energy storage system?

As renewable capacity is added to the grid, the need to store and flexibly manage electricity grows with it. This is where the crucial role of battery energy storage systems (BESS) come into play, storing and releasing energy for when it's needed most. We look at what's happening with the growth of BESS in the UK.

Why do we need a battery energy storage system?

Consequently, reliable storage solutions such as BESS (Battery Energy Storage Systems) will be increasingly required to smooth supply to the UK grid from renewables. BESS are battery systems that store electrical energy as chemical energy.

Are UK battery energy storage systems becoming bigger?

UK battery energy storage systems are becoming larger-- growing from the sub-50-MW size of several years ago into the substantial projects we see today.

What is a battery energy storage system (BESS)?

By definition, a Battery Energy Storage Systems (BESS) is a type of energy storage solution, a collection of large batteries within a container, that can store and discharge electrical energy upon request.

Are battery energy storage systems a sustainable solution?

In conclusion, Battery Energy Storage Systems represent an incredible opportunity for us to meet sustainability targets and they pave the way to a reality where the UK meets net zero emissions by 2050. There are a number of challenges we must address to get there, from a complex supply chain, to increased investment in R&D.

What are battery storage plants?

In short, battery storage plants, or battery energy storage systems (BESS), are a way to stockpile energy from renewable sources and release it when needed. When the wind blows and the sun shines turbines and solar panels may generate more energy than needed on a particular day.
