Domestic battery storage is a rapidly evolving technology which allows households to store electricity for later use. Domestic batteries are typically used alongside solar photovoltaic (PV) panels. But it can also be used to store cheap, off-peak electricity from the grid, which can then be used during peak hours (16.00 to 20.00).

"The point of a battery storage system is to store electricity produced by the solar PV (photovoltaic) array during the day for use in the evening," explains energy efficiency expert Tim Pullen. "If you live or work at home then the probability is that most of what is produced during the day can be used during the day and a battery system would be largely redundant.

Limited lifespan: Although durable, lead-acid batteries tend to have a shorter lifespan compared to some more expensive alternatives, which may require periodic replacements. Summary. In summary, lead-acid batteries are a solid and reliable option for energy storage in photovoltaic systems.
