Solar energy arrives here in the form of light and heat. We use technology to capture, magnify and convert it into useful purposes. As far as a house is concerned, there are three ways to do that: Photovoltaic (PV) uses silicon to convert light to electricity. Solar thermal uses the greenhouse principle to produce useful amounts of hot water.

gathering of this elementary Photovoltaic cell which can be called solar cells. To meet the power necessities of a specific system, a number of panels are linked in the following form; (1) Series connection is made to increase voltage (2) Parallel connection is made to increase current While its groupings form a solar PV array.
