What is a battery energy storage system?

A battery energy storage system (BESS) is an electrochemical device that charges (or collects energy) from the grid or a power plant and then discharges that energy at a later time to provide electricity or other grid services when needed.

What is an electrical grid without energy storage?

In an electrical grid without energy storage, generation that relies on energy stored within fuels (coal, biomass, natural gas, nuclear) must be scaled up and down to match the rise and fall of electrical production from intermittent sources (see load following power plant).

Do energy storage systems support grid inertia?

The authors concluded that energy storage systems, specifically CAES, will support the grid inertia if it is synchronously connected for a long duration. CAES can be used together with renewable energy sources to compress the air using the power generated from renewable energy sources during off-peak hours.
