How much paint do I need to repaint a shipping container?

A complete external repaint for a 20ft container will require approx 20 litres of our standard paint per coat, for a 40ft shipping container allow 35 litres per coat. These estimates can be reduced by 25% if applying using a spray rather than a brush. You will need to add thinners to the paint if spraying.

What kind of paint do you use for shipping containers?

The two most common types of paint for shipping containers are acrylic and epoxy paints. Both have their advantages, depending on the environment and the desired finish. Acrylic Paint: Acrylic paint is water-based and easy to apply. It dries quickly, making it a good option if you're looking for a fast, straightforward project.

Is marine grade paint good for shipping containers?

Marine grade paint is always used for shipping containers, this provides good protection from the elements and is very hard-wearing. Our high quality acrylic marine grade paint is hard wearing and has a satin finish. See our full range of shipping container paint colours to suit almost any taste!

Why are shipping containers painted?

A painted shipping container, specifically if in your brand or company colours, can be much easier to spot - making collection a less timely process. Sometimes the painting of shipping containers is to help easily identify their contents. Generally speaking, however, shipping containers are often painted in line with the following content guide:

Por 15 is a glossy black rust proof paint that seals rust away permanently from the container. Insulating storage containers - paint options. Finally, there is also a special kind of paint that is effective as paint insulation. Ceramic shipping container paint is now widely available for moderating extreme temperatures in the container interior.
