Batteries are perhaps the most prevalent and oldest forms of energy storage technology in human history. 4 Nonetheless, it was not until 1749 that the term "battery" was coined by Benjamin Franklin to describe several ...

Redox chemistry, the transfer of electrons, is behind all electrochemical processes. An electrochemical cell is any device that converts chemical energy into electrical energy or electrical energy into chemical energy. There are three components that make up an electrochemical reaction. There must be a solution where redox reactions can occur.

Electrochemical energy storage systems with high efficiency of storage and conversion are crucial for renewable intermittent energy such as wind and solar. [ [1], [2], [3] ] Recently, various new battery technologies have been developed and exhibited great potential for the application toward grid scale energy storage and electric vehicle (EV).
