Can convection heat transfer be ignored in honeycomb paperboard?

According to the experimental evidence, the convection heat transfer in honeycomb paperboard cannot be ignored. By fitting our experimental results under different conditions, new theoretical models considering convection heat transfer are proposed to calculate the effective thermal conductivity of honeycomb paperboard.

What is the thermal conductivity of a honeycomb paperboard?

According to Refs. [19,26], the thermal conductivity of air and paper is $0.0263 \text{ W m}^{-1} \text{ K}^{-1}$ and $0.09 \text{ W m}^{-1} \text{ K}^{-1}$, and 0.90 is chosen to be the surface emissivity of the honeycomb paperboard. Generally, the mesh size affects the numerical calculation accuracy.
