Practically speaking, when useable area is limited, a 22% efficient 300W solar panel could take up most of the available space, limiting the room for future panels and increasing the complexity of wiring, whereas it could be possible to install 2x 200W modules plus a 160W solar panel on a single controller, greatly increasing the total power of the array and keeping the wiring relatively ...

Bypass Diode and Blocking Diode Working used for Solar Panel Protection in Shaded Condition. In different types of solar panels designs, both the bypass and blocking diodes are included by the manufactures for protection, reliable and smooth operation. We will discuss both blocking and bypass diodes in solar panels with working and circuit diagrams in details ...

I am not sure why you said 2pcs of 120ah12V batteries in series. He needs batteries to supply the 1500w loads for 12hours at night. Basically that is $1500w * 12 = 18000wh$. dividing by 50% depth of discharge as you choose flooded, that is $18000/0.5=36000wh$ or divide by 0.8 if for AGM batteries, that is $18000/0.8 = 22500wh$.
