Fossil fuel depletion, climate change and greenhouse gas emissions has necessitated the change to renewable energy sources (Zhou et al., 2016), such as solar and wind, and it has consequently become a challenge to balance the correct mix of energies accordingly (Dassisti and Carnimeo, 2012). One of the most effective solutions to address this issue is to employ electrical energy ...

Oregon) have established energy storage targets or mandates. California adopted the first energy storage mandate in the USA when, in 2013, the California Public Utilities Commission set an energy storage procurement target of 1.325 GW by 2020. Since then, energy storage targets, mandates, and goals have been established in Massachusetts,
