Recently, cloud energy storage (CES) as a shared energy storage technology has been introduced to provide storage services for residential consumers at a lower cost. In order to overcome the limitations of the individual framework and create new economic prospects, the CES is used in this paper to support numerous residential consumers in the energy market.

Introduction. Energy storage systems are technologies capable of charging energy from an external source and discharging this energy at a later time. The emergence of storage technologies, such as grid-scale battery energy storage systems (BESS), has created new opportunities for shifting energy supply and demand.

Europe and China are leading the installation of new pumped storage capacity - fuelled by the motion of water. Batteries are now being built at grid-scale in countries including the US, Australia and Germany. Thermal energy storage is predicted to triple in size by 2030. Mechanical energy storage harnesses motion or gravity to store electricity.
