Such a converter must have bidirectional power flow capability with flexible control in all operating modes.

What is a DC/DC converter?

It is worth mentioning that the dc/dc converter must be bidirectional to ensure the power flow of charge and discharge of the batteries [7, 8]. In this sense, the general structure of a BESS connected to the MV grid is shown in Fig. 1. This system is composed of the battery pack, dc/dc stage and dc/ac stage.

Do DC-AC converters have bidirectional energy transfer capability?

As energy transfer in either direction is required for the system, each dc-ac converter must also have bidirectional energy transfer capability. With the same token, the dc buses in this structure must also be able to either generate or absorb energy.

Why do we need a DC-DC converter?

The primary problem addressed in this research is the need for an efficient and versatile DC-DC converter that can integrate multiple power sources, such as solar power and fuel cells, with an energy storage device battery (ESDB), while maintaining high efficiency and stable operation under various load conditions.
