What are the requirements for energy storage projects?

Eligible energy storage systems must be larger than 1MW or 1MWh with a minimum discharge duration of 2 hours. The storage-to-plant capacity ratio (in MW) must be larger than 40% and smaller than 100%. Selected entities will benefit from grants of up to EUR15 million per project and EUR37.5 million per company.

What are the operational limitations of energy storage?

Operating Limitations: Energy storage resources may be subject to operational constraints that do not affect traditional generation projects. For example, certain battery technologies will degrade more quickly if the state of charge is not actively managed within a certain range.

Which energy storage projects have been sold to Foresight Energy Infrastructure Partners?

In May last year, it sold two battery energy storage system (BESS) projects in southern England to Foresight Energy Infrastructure Partners: Sundon BESS, a 49.5MW project north of London that will connect with National Grid's Energy Park initiative; and Warley BESS, a 57MW project in Essex. Both sites have grid connection dates in 2024.

What are the safety requirements for energy storage technologies?

Safety: Minimum safety and operating requirements are common considerations for energy projects. Energy storage resources present additional safety concerns given their unique technological profiles. For battery storage technologies in particular, safety requirements should adequately address fire risks.

Will energy storage save the energy industry?

It's generation . . . it's transmission . . . it's energy storage! The renewable energy industry continues to view energy storage as the superhero that will save it from its greatest problem--intermittent energy production and the resulting grid reliability issues that such intermittent generation engenders.

Will a large-scale energy storage system be needed?

No matter how much generating capacity is installed, there will be times when wind and solar cannot meet all demand, and large-scale storage will be needed. Historical weather records indicate that it will be necessary to store large amounts of energy (some 1000 times that provided by pumped hydro) for many years.
