The facility is supporting Britain's clean energy transition, and helping to ensure secure operation of the electricity system.

What is the UK's first grid-scale battery storage system?

The UK's first grid-scale battery storage system directly connected to the electricity transmission network has been activated today (23 June) in Oxford. The scheme is part of the £41m Energy Superhub Oxford (ESO) project, which integrates energy storage, electric vehicle (EV) charging, low-carbon heating and smart energy management technologies.

Where will pivot power's new energy storage system go?

The system is the first to go live as part of Pivot Power's plans to deploy up to 40 similar sites throughout the UK. The 50MW lithium-ion battery energy storage system will be directly connected to National Grid's high-voltage transmission system at the Cowley substation on the outskirts of Oxford.

Can tagenergy energise a battery storage project?

A battery storage project developed by TagEnergy is now connected and energised on the electricity transmission network, following work by National Grid to plug the facility into its 132kV Drax substation in North Yorkshire.

High-Voltage Direct Current (HVDC) Transmission: While AC (Alternating Current) is the dominant choice for high-voltage transmission, High-Voltage Direct Current (HVDC) technology offers advantages in specific scenarios. HVDC excels in long-distance transmission with minimal energy losses and enables
