How are foldable solar panels made?

Folding solar panels are made by layering thin slices of silicon attached to an underlying layer of metal, plastic or glass, which then allows for folding. The silicon used in foldable solar panels is usually one of the following: Folding solar panels range enormously in size.

What is a foldable solar panel?

Some can fit into a wallet, others are designed to sit on the ground, perhaps outside a tent, or on a motorhome roof. Folding solar panels are often confused with flexible solar panels, however, the key difference is that while flexible solar panels are able to be bent to fit different shapes, foldable solar panels are rigid.

How do folding solar panels work?

Folding solar panels, like all solar panels, convert sunlight into electricity (more cleverly known as 'the photovoltaic effect'). Folding solar panels are made by layering thin slices of silicon attached to an underlying layer of metal, plastic or glass, which then allows for folding.
