

# Homemade solar bracket for buildings

How to Mount DIY solar panels?

Before you mount your DIY solar panels, you first need to join them into arrays. You can mount solar panels on the roof of your house, on poles, or on the ground of your home, although many people prefer mounting them on rooftops because they appear more beautiful and tap more sunlight on the roof.

How to install a solar panel rack?

The first step is to measure your solar panels. To get the correct measurements you need to install the mounting brackets on the solar panels. The height of the rack doesn't have to be the full height of the panel, but it does have to be tall enough so that the mounting brackets attach to the rack.

How do you build a solar box frame?

Notice the outside boards of the box frame are turned on edge and the inside runners are flat and flush with the top. The first step in building the frame is to build a basic box. The height will be the measurement from the bottom of the solar panel to the top of the upper bracket on the solar panel.
