How long do solar panels last on a flat roof?

Most UK roofs are strong enough to hold solar panels for their entire lifespan - which can last 40 years or more. This is because a solar panel system usually weighs about 20kg per square metre, which the great majority of roofs can hold. However, flat roofs may not always be strong enough for solar panels.

Can a roof be suitable for solar panels?

Even a roof that doesn't match the ideal requirements can still be suitable for solar panels. Part of the personal recommendation provided by Solar Together will be a breakdown of any additional costs needed to cover a variety of roofs. Often, roof characteristics will instead affect the output which solar panels generate.
