Which type of Inverter should be used in a PV plant?

One-phase inverters are usually used in small plants, in large PV plants either a network consisting of several one-phase inverters or three-phase inverters have to be used on account of the unbalanced load of 4.6 kVA.

How to choose a photovoltaic inverter?

Adequate sizing of the inverter: Proper sizing of the inverter is crucial to adapt to the specific needs of the photovoltaic system. To fully understand the operation of the photovoltaic inverter, it is essential to consider that the domestic grid uses alternating current with specific parameters: 230 volts and 50 Hz.
