How much does a 3.5 kWp solar panel system cost?

A 3.5 kWp solar panel system would typically require around 10 solar panels (at 350 W each) and cost between $\pounds 5,000$ and $\pounds 10,000$. *kWp stands for 'kilowatt peak'. This is the amount of power that a solar panel or array will produce per hour in prime conditions.

How much does a 5 kWp solar array cost?

In some cases, a 5 kWp solar PV array will be sufficient to meet those energy demands. A 5 kWp solar system will typically require around 15 solar panels at 350W each and cost between $\pounds 8,000$ to $\pounds 12,000$. Here is an overview of solar PV array installation costs which also shows how much roof space is required for each on average:

What is included in a complete solar panel installation?

Please bear in mind that a complete solar panel installation does not simply include the costs of the solar panels themselves, but also includes the following: Solar panel brackets. Solar panel inverter. Solar panel brackets. Installation i.e. labour costs of the installer. Cost of the solar battery storage system (although this is optional).
