

How to connect photovoltaic panels in series to a power source

We can see that the solar panel rated at 9 volts, 5 amps, will only use one fifth or 20% of its maximum current potential reducing its efficiency and wasting money on the purchase of this solar panel. Connecting solar panels in series with different current ratings should only be used provisionally, as the solar panel with the lowest rated ...

I hope to see in the morning The three east side panels perform well and in the afternoon the westside panels perform well. All three east west parallel PV-panel pairs will be connected in series to get higher voltage and go to my one input PV inverter. Is this a good, cheap and smart solution? Or will this not work? Thanks for your answer!
