There are three ways to do this. ... Connect a wind turbine to a 48V solar battery; Install a wind turbine with high voltage batteries;

48V battery systems offer numerous benefits compared to lower voltage systems, including more solar power per MPPT, which results in far greater solar capacity per MPPT in DC-coupled systems. Moreover, the reduced chance of failure as the higher voltage and lower current minimise the heating effect caused by resistance in connections and terminals.

However, to truly harness the potential of solar energy, connecting the solar panels to an inverter is essential. The inverter serves as the heart of the solar power system, converting the direct current (DC) electricity produced by the solar panels into alternating current (AC) electricity, which is suitable for powering homes and businesses.
