

How to write a new energy storage report

Writing a report. What is a report? A report is a well-structured and researched document that informs a specific audience on a particular problem or topic. The purpose of a report is to inform, guide or influence decision making and/or the outcome of a course of action. Writing reports is common in many workplaces.

However, renewables still account for only just above 10% of final energy consumption and the energy sector remains dominated by fossil fuels. Renewables need to increase further and faster to bring about an energy transition that achieves climate targets, ensures energy access for all, reduces air pollution and improves energy security.

Grid-scale storage plays an important role in the Net Zero Emissions by 2050 Scenario, providing important system services that range from short-term balancing and operating reserves, ancillary services for grid stability and deferment of investment in new transmission and distribution lines, to long-term energy storage and restoring grid operations following a blackout.
