

Illustrated explanation of the routine of installing photovoltaic panels

What is the pre-installation phase of a solar panel installation?

The pre-installation phase involves a thorough analysis of your property's suitability for solar panel installation. An expert will conduct a site survey to gather information about your roof and its orientation to the sun, considering any obstacles or shading that may affect the performance of the solar panels.

How are solar panels installed?

The installation phase involves the actual installation of solar panels. Once the installation and design have been approved, an expert will schedule a time to install the solar panels. The first step involves installing the mounting brackets onto your roof. The brackets are used to mount the solar panels and secure them in place.

How does a solar panel installation work?

The installer will have to lift some of the roof tiles to fix the anchors to the rafters in the loft. This will give the solar panel mounts a stable foundation, and will make sure they don't get damaged in stormy weather. Once the roof anchors have been fixed to the property, the installer will attach the solar panel mounting system to them.

Is solar panel installation a good investment?

Solar panel installation is a smart investment for homeowners and businesses looking to save money on energy costs and reduce their carbon footprint. By following the process outlined above, you can ensure that your solar panel installation is conducted smoothly and successfully.

How do commercial solar panels work?

The actual process of installing commercial solar panels is similar to residential installations. The mounting brackets are installed on the roof, and the solar panels are then placed onto the mounting system. However, commercial installations may require larger and heavier equipment to handle large panels.

Can solar panels be installed vertically or horizontally?

The panels themselves can be installed vertically or horizontally. Once the mounting system is set up, it's time for the moment we've all been waiting for: getting the solar panels onto the roof. Your installer will start by placing the solar panels onto the mounting system, without fully securing them just yet.
