What are the problems with solar power generation?

In solar power generation, solar cells play a core role in converting light energy directly into electrical energy. The biggest problem related to this method of power generation is variations in the amount of power generated, which depend on the weather and the length of the day and night.

Why has solar power not been fully introduced in Japan?

This is the main reason why solar power generation has not been fully introduced. In Japan and other regions where the weather is not always clear, the operating rate of solar power generation systems would be low, which would in turn raise operating costs, making it difficult to introduce these systems on a large scale.

Why is solar power generation not fully introduced?

When such an unstable power source is connected to the current power system, other power generators need to operate in a pattern that compensates for the instability. This can severely affect the stability and efficiency of the entire system. This is the main reason why solar power generation has not been fully introduced.
