A hybrid generator combines conventional fuel-powered generation with renewable energy sources like solar or wind power. Generator Power's hybrid generators, particularly those from Yanmar and Himoina, are engineered for optimal efficiency, reducing emissions and operational costs while ensuring a reliable power supply in various settings.

If I have solar going to the generator box, that means it's also going to the main panel. The reason the generator starts is because it sense that there is no grid power. But, if there is solar power in the generator panel that is also going to the main panel, when the grid goes down, I would think the generator won't know it because of the solar.
