Nowadays wind energy is becoming increasingly significant in the planning, development and growth of new electricity supply systems. Special attention has been given to land-based turbines for ensuring the efficient economical operation of massive hubs rising 100m above the ground, based on the idea that the bigger the turbine, the more complicated are the ...

Another key trend is the increasing scale of wind turbines and FOW project capacities in newer ventures. For instance, the 1,300 MW capacity Korea Floating Wind (2028), with greater than 10 MW of wind turbines, is much larger than the WindFloat Atlantic (2019), which totals 25 MW with 8.4 MW of wind turbines
