What are electrical energy storage systems (EESS)?

Electrical energy storage systems (EESS) for electrical installations are becoming more prevalent. EESS provide storage of electrical energy so that it can be used later. The approach is not new: EESS in the form of battery-backed uninterruptible power supplies (UPS) have been used for many years. EESS are starting to be used for other purposes.

This method is operated by deviating the operating point of the PV system from maximum power point (MPP) or using energy storage systems. PV-battery systems can control the output power based on ...
