Firstly, the multi-energy microgrid was taken as the research object, the microgrid system architecture was analysed, and the multi-agent partition in the system was pursued based on different economic interests.

Hierarchical partitions allow you to scale beyond the logical partition key limit of 20 GB, and are a good solution if you'd like to ensure each of your tenants' documents can scale infinitely. If your current partition key or if a single partition key is frequently reaching 20 GB, hierarchical partitions are a great choice for your workload.

Hierarchical control has emerged as the main method for controlling hybrid microgrids.
