New Transit Retrofit Solar Bracket

/products/direct-mount-tower-brackets-transitHein shows you how to in...

I used 8020 crossbars for my solar panels mounting and Hein engineered his brackets, which he sells, simplifying my proto design. Make sure to pick your mount to allow an awning mount if you plan to have it. There is clearance require between the roof rail and the solar panel edge so the awning"s brackets can be mounted on the rail.

Instead of 80/20 aluminum, I am going for a basic square and rectangular rails, riveted with brackets cut from a long piece of L-channel aluminum. Like this --> (4) DIY Aluminium Roof Rack NO WELDING Ford Transit Conversion - ...

Below are some photos showing 2 Grape Solar 190 watt panels mounted using the new towers and a 1 1/2 x 1 1/2 x 3/16 8ft long aluminum angle for the rails. These panels are 58.27" long. 2x2x3/16 angle could also be used but had this angle on hand.

Whether you need more power to charge a new electric vehicle or because of increased home consumption (maybe you invested in a new heat pump), there are many reasons why people may want to retrofit an existing solar energy system. Retrofitting is the industry term for upgrading or expanding an existing system, and it can mean adding new panels ...

So I decided to tackle a projector retrofit and WOW, I couldn't be happier. Took a little longer then expected but well worth the time and money. ... The transit has H11 factory bulbs and the projectors were designed for H4, so ...

This time we're building our own DIY unistrut roof rack as part of our Renogy solar panel installation. We had a look at Ford Transit Roof racks off the shel...

If you have a Ford Transit and you do not have stock roof rails, but you need to mount your solar panels on your camper van, this guide is for you. We went to the hardware store a million times ...

I used Hein"s tower bracket and Faztek (80/20 clone) 1.5 inch quarter round for the leading edge of my 2 Grape Solar 180 watt panels. For the trailing edge I used aluminum angle, bent a bit, with VHB tape to hold it down so that I didn't have to penetrate the roof.

The HDPE was ripped 6 degrees on a table saw then cut to 4.75" lengths. The spot faces are for the PlusNuts (aka Cross Nuts) which have a pull-out strength of something like 1,200 lbs each, and there are two

New Transit Retrofit Solar Bracket

at each tower. I put butyl tape around the holes in the roof before putting the bracket on, then butyl around the head of each bolt.

We have a 2018 mid roof 148 wb (not extended) Transit. The deluxe maxxair fan and 2 100w solar panels were installed prior to our purchasing the van. The fan is positioned 33 inches in front of the D pillar just in front of a roof rib (the 36 inch space between ribs).

If you have to drill the roof anyway,, id be using bolts for the brackets. And try to put the brackets where the roof supports are and bolt through there if poss.. tigerseal will ...
