Wiring solar panels in parallel (pluses together and minuses together) will increase the current, but leave the volts the same. So two 18V 5.5A solar panels wired in parallel will be 18V, 11A output. Schematic for Wiring Solar Batteries in Parallel. Finally, wiring batteries in parallel will increase the amp hours, but leave the volts the same.

For example, we have eight solar panels of 12 V, 6 A, and 72 Watts. We connect the solar panel 1 - 4 in parallel to make parallel solar panel bank #1 and the output is: $6 + 6 + 6 + 6 = 24$ Amps, 12 V. $12 \text{ V} \times 24 \text{ Amps} = 288$ Watts. Now, for the parallel solar panel bank #2, we connect solar panels 5 - 8 in parallel.
