How do I design a photovoltaic and solar hot water system?

Provide an architectural drawing and riser diagram for the homeowner showing the planned location for future photovoltaic and solar hot water system components. Space requirements and layout for photovoltaic and solar water heating system components should be taken into account early in the design process.

What is included in a solar panel bracket?

The bracket accommodates Enphase, SolarEdge and DirectGrid microinverters and includes all necessary mounting hardware. Wiley grounding clips (WEEB DMC) are used in conjunction with the Module Clamps for grounding PV modules to Ballast Tray.

What is the Sun approach angle for a ballasted roof mount?

The sun approach angle of the Ballasted Roof Mount system varies depending upon the amount of ballast required for your installation and whether or not Wind Deflectors are utilized. The sun approach angle for most installations will be 17 degrees. The row spacing for this system is 21.97 inches (module to module).

How do you attach a PV module to a rail?

Module Clamp: Secures the PV module to the rail. Use four clamps for each Ballast Tray, two on north and south two Ballast Trays. Multiple sizes available depending on thickness of PV module. Wind Deflector: Joins Ballast Trays together into a continuous structural member. Distributes and reduces loading on roof structure.
