As shown in Fig. 1, the photovoltaic power generation (simulated photovoltaic power supply) is the conversion of solar energy into direct current (DC) electricity output. The energy storage inverter is a device that converts DC power generated by photovoltaic into alternating current (AC) power output and realizes various power conversion management, ...

The main difference with energy storage inverters is that they are capable of two-way power conversion - from DC to AC, and vice versa. It's this switch between currents that enables energy storage inverters to store energy, as the name implies. In a regular PV inverter system, any excess power that you do not consume is fed back to the grid.
