An inverter is a crucial part of every solar power system because it transforms solar energy into usable electricity. So, let's explore the intricacies of connecting PV panels to an inverter.

What does a solar inverter do?

Inverters convert the solar power harvested by photovoltaic modules like solar panels into usable household electricity. Some system topologies utilise storage inverters in addition to solar inverters. But what exactly does a solar inverter do -- and how does it work? Read on to find out. [What Is a Solar Inverter?](#)

What type of inverter is used for solar panels?

The type of inverter used for solar panels depends on how it is connected to them. You can use string inverters, microinverters, and power optimizers. Once you have wired your solar panels in the desired configuration, you need to connect them to the inverter using the appropriate connectors and cables. Here are the connection steps to follow:

Do solar panels need an inverter?

However, to truly harness the potential of solar energy, connecting the solar panels to an inverter is essential. The inverter serves as the heart of the solar power system, converting the direct current (DC) electricity produced by the solar panels into alternating current (AC) electricity, which is suitable for powering homes and businesses.

Does a solar inverter need a charge controller?

In off-grid or hybrid solar systems, PV modules may send DC electricity to a solar charge controller first. However, the solar inverter is still an integral part of the balance of the system. (Source: Penn State) Microinverters -- also known as module inverters -- are generally built into photovoltaic modules.

How does a photovoltaic inverter work?

Photovoltaic solar panels convert sunlight into electricity, but this is direct current, unsuitable for domestic use. The photovoltaic inverter becomes the protagonist, being vital for solar installations as it converts direct current into alternating current. This process allows integrating solar energy into our homes.
