**Solar Module Cell:** The solar cell is a two-terminal device. One is positive (anode) and the other is negative (cathode). A solar cell arrangement is known as solar module or solar panel where solar panel arrangement is known as photovoltaic array. It is important to note that with the increase in series and parallel connection of modules the power of the modules also gets added.

To supply the electrical installation, the DC output from the modules is converted to AC by a power inverter unit which is designed to operate in parallel with the incoming mains electricity supply to the premises, and as such is commonly known as a "grid-tie" inverter. The AC output of the PV inverter (the PV supply cable) is connected to ...
