

Photovoltaic inverter short circuit protection value

Why are PV inverters able to supply more short circuit current?

In principle the PV inverters are able to supply more short circuit current during fault scenarios than only 1 p.u. reactive current due to current reserve margin of the inverter system. The control is able to limit the current injection during faults to the nominal but also to an overload current limitation of the generation system.

Do photovoltaic inverters contribute to short-circuit currents?

To conduct this analysis, an autotransformer-based voltage dip generator is proposed as a means to test the photovoltaic inverters' contribution to short-circuit currents. Laboratory tests are then performed to obtain the short-circuit current contribution of eight single-phase photovoltaic inverters.

What is an inverter short circuit current (I_{sc}) rating?

Inverter short circuit current (I_{sc}) rating is required to verify that the PV module string short circuit current under high irradiance does not exceed the maximum input current for the PV inverter's MPPT for compliance with NEC 690.8 (A) (1) (1) and the inverter listing.

Why are PV inverters required during a short-circuit fault?

During the short-circuit fault, the PV inverters are required to provide the grid-voltage support required by the grid codes. It is assumed that the fault can be detected instantaneously and a fault signal is generated.

Is a PV inverter a constant power source?

The PV inverter is modelled as a constant power source, however, for fault analysis, the authors assumed the limiting current to be twice the rated current, for the worst-case scenario. The inverter current and voltage are considered in phase for unit power factor operation.

Do small-scale single-phase photovoltaic inverters protect distribution systems?

This paper presents an analysis of the fault current contributions of small-scale single-phase photovoltaic inverters under grid-connected operation and their potential impact on the protection of distribution systems.
