Can a solar array support structure withstand a wind load?

Even fixed solar array support structures have sophisticated design, that needs to be analyzed and often improved in order to withstand the wind load. The same applies of course to adjustable designs to an even greater extent. The analysis has to be carried out for many wind directions.

How long do solar panel support structures last?

International regulations as well as the competition between industries define that they must withstand the enormous loads that result from air velocities over 120 km/h. Furthermore, they must have a life expectancy of more than 20 years. In this paper, the analysis of two different design approaches of solar panel support structures is presented.
