The term "photovoltaic" means the direct conversion of light into electrical energy using solar cells. In order to generate a sufficient amount of power, or "wattage", multiple panels (otherwise known as "modules") are connected together in "strings" to create an "array". An array can be made up from as little as 3 modules ...

How much do thin-film solar panels cost? You'll pay around $\text{R}1.04$ per watt for thin-film solar panels, or roughly $\text{R}6,240$ for a 6 kW system. That's cheaper than the cost of a 4 kW solar panel system, which will typically set you back $\text{R}6,500$.. The problem is that thin-film solar panels take up more space, because with a lower efficiency rating, you need more coverage to ...
