How do I install a solar PV system?

The first step in installing a solar PV system is meeting with a qualified solar installer. During this initial consultation, the solar company will: - Assess your energy needs : By reviewing your electricity bills and understanding your consumption patterns, the installer can recommend the right size and capacity of the solar system.

Should a general contractor install a solar PV system?

A general contractor may face a choice between using an electrical subcontractor or a solar subcontractor to install the PV system. A good solar contractor will have the expertise in solar PV systems plus qualified electricians on staff.

What is a roof mounted photovoltaic system guidance?

The guidance refers only to the mechanical installation of roof mounted integrated and stand-off photovoltaic systems; it provides best practice guidance on installation requirements and does not constitute fixing instructions.

How does a solar PV system work?

Your solar PV system will typically come with a monitoring system that allows you to track its performance. Some systems even offer real-time monitoring through mobile apps, so you can see how much energy your system is producing. While solar systems generally require very little maintenance, it's important to keep an eye on:

Can solar panels be mounted on a roof?

Mounting Location - Solar modules are usually mounted on roofs. If roof area is not available, PV modules can be pole-mounted, ground-mounted, wall-mounted or installed as part of a shade structure (refer to the section "System Components/Array Mounting Racks" below). Shading - Photovoltaic arrays are adversely affected by shading.

Can a PV system be installed on a roof?

Nevertheless, it is possible to install PV modules on all roof types. If the roof will need replacing within 5 to 10 years, it should be replaced at the time the PV system is installed to avoid the cost of removing and reinstalling the PV system.

Solar tracking systems are a way to improve on this. They use various manual or automated systems to change the angle of the panels in a solar array so that they track the movement of the sun across the sky. Tracking systems increase the amount of time that solar panels are perpendicular to the sun and can dramatically increase the amount of electricity ...
