Solar panels are not a one-size-fits-all solution - there are many factors that needs to be taken into account when designing a solar system to make sure it meets your needs.

Suppose, in our case the load is 3000 Wh/per day. To know the needed total W Peak of a solar panel capacity, we use PFG factor i.e. Total W Peak of PV panel capacity = $3000 / 3.2$ (PFG) = 931 W Peak. Now, the required number of PV ...

Before contacting potential installers, consider learning the basics of how solar panel systems work to determine whether or not your home is suitable for an installation. The ideal home for solar panels in the US has a south-facing roof (toward the equator) with ample unobstructed installation space and full sunlight most of the day.

Page 4 of 11 - A consumer's guide to solar PV installation Solar PV - How it works There are three basic types of PV panels: - Monocrystalline - Polycrystalline - Amorphous All are made from silicon, but what sets them apart is the way in which the silicon is cut and treated. When exposed to sunlight the semiconducting material
