How does a photovoltaic system work?

The heart of a photovoltaic system is the solar module. Many photovoltaic cells are wired together by the manufacturer to produce a solar module. When installed at a site, solar modules are wired together in series to form strings. Strings of modules are connected in parallel to form an array.

Should a general contractor install a solar PV system?

A general contractor may face a choice between using an electrical subcontractor or a solar subcontractor to install the PV system. A good solar contractor will have the expertise in solar PV systems plus qualified electricians on staff.

What is a solar PV module?

Solar modules, though similar in design (silicon crystalline-type) will vary by size and power produced. Readers are encouraged to refer to the Extension factsheet, "Demystifying the Solar Module" (AZ1701) for information about solar PV modules. Simple systems have fewer components, but are limited to providing energy when the sun is shining.

What are the components of a solar panel system?

A solar panel system is composed of several key components. The first and most important component is the solar panels themselves. These panels are made up of photovoltaic cells, which convert sunlight into electricity. They are typically made from silicon, a widely available and efficient material for capturing sunlight.
