What is an off-grid inverter?

In off-grid solar we regularly talk about off-grid inverters. These convert the DC power of a battery power store into 230v AC power so that you can use your appliances. They are an essential component of any off-grid solar system as without it, all that potential energy stored in your batteries cannot be used to power your property.

What is an off-grid Solar System?

Modern off-grid solar systems use advanced inverters to manage batteries, solar, and backup AC power sources such as generators. The off-grid inverter, often called an inverter-charger, is the heart and brain of an off-grid system.

What is a hybrid solar inverter?

A hybrid solar inverter is the combination of a solar inverter and a battery inverter into a single piece of equipment that can intelligently manage power from your solar panels, solar batteries, and the utility grid at the same time without customer intervention. Why have a Changeover switch? Powercuts seem like a more likely scenario this winter.

What is the difference between grid-tied and off-grid solar systems?

Grid-tied and off-grid solar systems differ primarily in their connection to the main energy grid. A grid-tied solar system is primarily connected to the electricity grid and can both draw from and contribute to it. This is beneficial when solar generation is not enough or during nighttime.

What does a solar inverter do?

Inverters convert the solar power harvested by photovoltaic modules like solar panels into usable household electricity. Some system topologies utilise storage inverters in addition to solar inverters. But what exactly does a solar inverter do -- and how does it work? Read on to find out. How does off-grid solar work?

Both consist of solar panels and an inverter to convert DC to AC. Off-grid solar remains permanently disconnected from the grid. It therefore needs to work differently than an on-grid installation. With an on-grid system, the inverter sends energy into your home, which also connects to the grid via a meter.

This is a scenario we use in off-grid design when the solar must be located over 20m from the battery store or the power demand is large in the daytime when the sun is out. This is the most efficient way to use the power. Sunstore has a selection of grid-tied inverters and off-grid inverters suitable for any use.
