How do I design a photovoltaic and solar hot water system?

Provide an architectural drawing and riser diagram for the homeowner showing the planned location for future photovoltaic and solar hot water system components. Space requirements and layout for photovoltaic and solar water heating system components should be taken into account early in the design process.

Does proficad support photovoltaic circuit diagrams?

ProfiCAD supports the drawing of photovoltaic circuit diagrams. In addition to the common electrical engineering symbols, the library includes symbols such as solar cells, photovoltaic panels, solar collectors, inverters, etc. Should you need more symbols, you can create them in the symbol editor. Some sample drawings (click for full size):

How much space does a photovoltaic system need?

Photovoltaic modules installed on the ground or on a flat surface occupy an area of approximately 20 m²/kWp, avoiding shading between the rows of modules. The design of a photovoltaic system, from the public operator's network to the photovoltaic modules, requires careful planning and compliance with local regulations.

How much space does a photovoltaic module occupy?

Photovoltaic modules installed on a sloping roof or facade occupy an area of approximately 8 m²/kWp. Photovoltaic modules installed on the ground or on a flat surface occupy an area of approximately 20 m²/kWp, avoiding shading between the rows of modules.

How much does a solar panel weigh?

Weight of solar panels: PV16-M10=25kg. Where the panels are fitted into a pitched tiled roof, they are fixed directly above the roof battens with a uniformly distributed load of 12.8kgperm². Roof structure modifications are unlikely to be necessary, as this is less than the weight of the replaced roof covering. Details of flashing-fixing see sheets 3 to 6. Redline shows approximate extent of tiles.

How does pvcad auto-populate a template?

Instead of manually entering system data into the site plan, the array layout, the single-line diagram, and other documents, PVCAD auto-populates fields in the template. For example, PVCAD's IronRidge templates side cutouts of the IronRidge mounting system in the model space.

the mounted aluminum framed PV panels (i.e., other PV technologies or ground mount systems), EPA recommends that an installer certified by the North American Board of Certified Energy Practitioners (NABCEP) determine the ideal system for the project's unique building environment. The installer must

o Solar panel installation is not short duration work and will need scaffolding or similar equipment. o It should have a boarded working platform and full edge protection (double guard- rails and toe-boards) to stop people and tools from falling. Photovoltaic (PV) Power Supply Systems (ISBN 0 85296 995 3, 2003) 1.3 Safety From the outset, the designer and installer of a PV system must consider the potential hazards carefully, and systematically devise methods to minimise the risks. This will include both mitigating potential hazards present during and after the installation phase.
