

Why do fixed PV panels need tilt angle?

Therefore, fixed PV installations with a well-engineered tilt angle are still prevalent in PV industry. The optimum performance of a PV panel depends on the amount of incident solar radiation on it. So, a panel needs to be inclined in such an angle that maximum sunrays intercept its top surface vertically.

What is the optimum tilt angle for PV panels?

In Vaal Triangle, South Africa, the optimum tilt angles were found to be  $26^\circ$ ; and  $36^\circ$ ; measured analytically during winters by Asowata et al.,. Equations were used for different tilt angles based on mathematical models to evaluate maximum power output of a PV panel.

Do tilt angle and azimuth angle affect PV panel output?

The effect of tilt angle and azimuth angle on daily basis for PV panel was studied by Yakup and Malik. Varying the tilt angle on monthly basis gives nearly same output relative to daily basis. 5% increased energy is obtained annually compared to fixed horizontal surface.

What is the optimal tilt angle of PV panel for Chandigarh region?

In the present work, the study on the optimal tilt angle of the PV panel for the Chandigarh region has been done. It can be seen that the tilt angle for winter is greater than in summer due to the position of the sun in the sky. It has also been found that the annual tilt angle for the region varies approximately  $26-28^\circ$ .
