Solar PV generation is higher in the summer than the winter due to longer days and the sun being higher in the sky. Figure 4 shows the typical monthly values of solar PV generation for a 2.35kW solar PV system in London which faced 60 degrees from south. From year to year there is variation in the generation for any particular month.

Higher PV shares, particularly in distribution grids, necessitate the development of new ways to inject power into the grid and to manage generation from solar PV systems. Making inverters smarter and reducing the overall balance-of-system cost (which includes inverters) should be a key focus of public R& D support, as they can account for 40-60% of all investment costs in a ...
