Do photovoltaic systems need maintenance?

The expansion of photovoltaic systems emphasizes the crucial requirement for effective operations and maintenance, drawing insights from advanced maintenance approaches evident in the wind industry. This review systematically explores the existing literature on the management of photovoltaic operation and maintenance.

What is operation & maintenance (O&M) of photovoltaic systems?

1 Introduction This guide considers Operation and Maintenance (O&M) of photovoltaic (PV) systems with the goal of reducing the cost of O&M and increasing its effectiveness. Reported O&M costs vary widely, and a more standardized approach to planning and delivering O&M can make costs more predictable.

What is a photovoltaic system review?

This work intends to make a review of the photovoltaic systems, where the design, operation and maintenance are the key points of these systems. Within the design, the critical components of the system and their own design are revised.

Why is maintenance management important for PV power plants?

Therefore, maintenance management is essential for reliable and effective operation of PV power plants, ensuring uninterrupted system operation and minimizing downtime. Compared to well-established technologies such as hydro, thermal, and wind, the O&M processes for PV systems are not yet fully structured in many operating companies.

What are the key points of photovoltaic systems research?

It has been analyzed how at present, the greatest advances in photovoltaic systems are focused on improved designs of photovoltaic systems, as well as optimal operation and maintenance, being these the key points of PV systems research. Regarding the PV system design, it has been analyzed the critical components and the design of systems.

Which O&M best practices apply to PV power plants in-stalled?

Standard O&M best practices as described in section 5.1 also apply to PV power plants in-stalled in hot and humid climates. Additional key recommendations for O&M to prevent typical risks in PV power plants operating in hot & humid climates are given in the Table 10. Table 10: Recommendations for O&M of power plants in hot and humid climates.
