

Where can a photovoltaic system be installed?

Photovoltaic system modules can be installed on a building's roof, or on the ground. During the initial survey, the installer will check the feasibility, taking into account the required space for the installation of the modules: about 3-4 photovoltaic modules are necessary for every 1,000 W of installed power.

Can a photovoltaic system be installed on a roof?

Yes, a photovoltaic system can be installed on a roof. However, installation requires prior communication to the grid operator of the 'Unified application form for the construction, connection and operation of a small photovoltaic system incorporated onto the roof of a building'.

What is a roof mounted photovoltaic system guidance?

The guidance refers only to the mechanical installation of roof mounted integrated and stand-off photovoltaic systems; it provides best practice guidance on installation requirements and does not constitute fixing instructions.

To whom is the photovoltaic (PV) guide applicable?

This guide is applicable to Clients planning or undertaking installation of Photovoltaic (PV) systems on 'Large Scale' buildings. These buildings are typically owned by organisations from the public or private sector, such as educational establishments, local government, a local community, or commercial organisations.

Can a PV system be electrically installed?

Guidance exists for electrical installation of PV systems [15,16,17] but there is little equivalent guidance for mechanical installation.

How do I install a solar PV system?

The first step in installing a solar PV system is meeting with a qualified solar installer. During this initial consultation, the solar company will: - Assess your energy needs : By reviewing your electricity bills and understanding your consumption patterns, the installer can recommend the right size and capacity of the solar system.

The Spanish photovoltaic sector could be a serious opportunity for the recovery and economic growth of the country, by serving as a support platform for the National Integrated Energy and Climate Plan (NIECP) 2021-2030, whose objective is to determine the lines of action required for the appropriate and efficient use of clean energy in order to benefit the economy, ...
