How can a large solar PV plant reduce the cost of electricity?

For most large solar PV plants, reducing the levelised cost of electricity (LCOE) is the most important design criteria. Every aspect of the electrical system (and of the project as a whole) should be scrutinised and optimised. The potential economic gains from such an analysis are much larger than the cost of carrying it out.

How much does a European solar PV plant cost?

Total costs for a European solar PV plant average around US \$1.7 million per MW. However, European costs are only a partial proxy for costs in other markets, and project costs must be adjusted for local duties and taxes and logistics/transport costs.<sup>76</sup>

How to invest in large-scale PV power plants?

Investment in large-scale PV power plants requires a detailed evaluation of solar radiation potential and grid availability, as well as a load analysis and a precise economic evaluation. When the investment cost based on the above-mentioned parameters is known, an estimation of the operating costs should be the next step.

Are solar PV power plants a good investment?

Solar PV power plants represent a large financial investment. The PV modules are not only valuable, but also portable. There have been many instances of module theft and also theft of copper cabling. Security solutions are required to reduce the risk of theft and tampering.
