What are the strategies for energy management systems for smart microgrids?

There are many strategies for energy management systems for smart microgrids such as load management, generation management, and energy storage management<sup>4</sup>. The control system of a microgrid must continuously analyze and prioritize loads to maintain a balance between power generation and consumption.

How can a microgrid reduce energy costs?

To reduce energy costs, a facility with a microgrid can leverage a BESS to store power from variable renewable energy (VRE) sources, such as solar or wind, and then substitute the stored energy for utility power when utility rates are highest in an attempt to arbitrage.

How to provide flexible power for a microgrid?

To provide flexible power for the microgrid with the consideration of the randomness of renewable energies, diesel, natural gas, or fossil fuels are usually used for power generation in today's microgrid. However, using this kind of energy source will introduce carbon emissions.

Why are energy storage systems important for microgrid systems?

Energy storage systems (ESS) are essential for microgrid systems because they store and distribute electrical power to stabilize load and renewable energy generation, improve power quality, and ensure system reliability. ESSs are classified by storage and response as electrical, mechanical, chemical, electrochemical, or thermal.

What is a smart microgrid?

Smart microgrids (SMGs) are small, localized power grids that can work alone or alongside the main grid. A blend of renewable energy sources, energy storage, and smart control systems optimizes resource utilization and responds to demand and supply changes in real-time<sup>1</sup>.

What are microgrids & how do they work?

Microgrids<sup>12, 13</sup> are small, localized energy systems that can generate, store and distribute energy independently or in conjunction with the main energy grid. In this context, community power storage systems are gaining relevance<sup>14</sup> and can serve as nuclei for microgrids in urban areas, offering potential interconnection possibilities<sup>13, 15, 16</sup>.
